

Trainer Role - Detailed LMS Workflows

A practical, step-by-step guide for setting up, delivering and completing training

1. Create or open a training

Trainings > Create Training / Open

- 1 Choose Create Training, or open an existing training.
- 2 Enter the title, type, description and delivery details.
- 3 Set start/end dates, times, venue and training status.
- 4 Assign the trainer, healthcare category and devices as needed.
- 5 Save the training, then open its workspace.
- 6 If locked, unlock or ask an admin before changing content.

Outcome: a workspace with Course, People, Marks, Attendance, Package and Settings tabs.

2. Add trainers and trainees

Training Workspace > People

- 1 Open the People tab and review the current trainer and trainee list.
- 2 Use the assignment controls to add the required trainer(s).
- 3 Enroll trainees individually or use the available bulk/import tools.
- 4 Confirm each trainee ID, email and enrollment status.
- 5 Remove or correct an assignment before delivery if necessary.
- 6 Return to People later to verify the final class list.

Attendance cannot be recorded until trainees are enrolled.

3. Create sections and materials

Training Workspace > Course

- 1 Optional: choose Create Section, or Import Sections from a previous training.
- 2 Choose Create Material.
- 3 Select Video, Document or Link.
- 4 Enter the material title and choose a section (or General Materials).
- 5 Choose Private after lock, or Public and set an access expiry.
- 6 Add the video/link URL, or upload a PDF/DOC/DOCX/PPT/PPTX file (max 5 MB).
- 7 Choose Create Material, then open it to verify the content.

Use the item menu to edit, delete or review the material access report. Locked trainings disable creation.

4. Prepare questions and tests

Question Bank + Training Workspace > Course

- 1 Create questions one at a time, or use the bulk upload option.
- 2 Enter the question, answer choices and correct answer where applicable.
- 3 Review the question bank and correct duplicates or errors.
- 4 Open the target training and add the required assessment/test.
- 5 Choose the assessment stage: pre, post, certification or refresher.
- 6 Attach the relevant questions and confirm scoring settings.
- 7 Preview the learning sequence before trainees begin.

Trainees complete available assessments from their training workspace.

5. Create an attendance session

Training Workspace > Attendance > Add New

- 1 Confirm trainees are enrolled, then open Attendance and choose Add New.
- 2 Select an available date within the training start/end dates.
- 3 Enter the session start time and end time.
- 4 Mark each trainee Present or Absent; use Select All for a quick starting point.
- 5 Add optional notes for individual trainees.
- 6 Choose Save Attendance.
- 7 Check Summary for totals and attendance rate.
- 8 Use Update to correct a session, or Report to generate the attendance report.

A saved date/time combination becomes the attendance session used by summaries and reports.

6. Grade, release and export

Marks > Package > Results

- 1 Open Marks and review submitted assessment responses.
- 2 Enter or verify scores, comments and practical learning outcomes.
- 3 Calculate/check the final result for each trainee.
- 4 Resolve missing attendance, marks or required training data.
- 5 Release results only when your role and the training status permit it.
- 6 Open Package and generate the required PDF, XLSX or ZIP outputs.
- 7 Verify names, IDs, marks and attendance in the exported files.
- 8 Trainees can then view My Results and download permitted certificates/results.

Admin has full release/configuration access; trainers act within assigned permissions.

Important checks

Trainer: delivery and grading access within assigned trainings and permissions. | Locked training: content changes are disabled | Verify saved records and generated files before completion.
